

Aeronauts

Welcome to Aeronauts! An aerial combat game you can fit in your pocket!

Each aeronaut will need:

x1 plane token, x4 altitude tokens

The aeronauts will share:

x1 of each move template, x1 range string (with 2 knots 23cm apart),
x4 Red d8 **Attack** dice, x4 d8 Green **Defense** dice

At the start of the game each player secretly assigns the numbers **4,3,3,2** to their **Attack**, **Defense**, **Speed** & **Health** and simultaneously reveals their choices.

Determine who starts with a high roll of a d8.

Each player places their plane in front of them in turn, and not closer than the range string to another players' token.

There are 2 stages each round. **Move** & **Attack**:

Move Stage:

- Players take turns to move their plane using the move templates, up to their **Speed** value. Each move template has a cost of 1, 2 or 3,

for the straight, bank & turn templates respectively.

- To move, place the template at the front of the plane, and move the plane token to the other end of the template.

- The player may use templates up to the value of their speed, for example a plane with a Speed of 4 can use move execute 2 straight maneuvers & 1 bank maneuver.

- A player must move at least once each turn otherwise their plane will stall and they would plummet to the ground!

Attack Stage:

- Players take turns to roll a number of **Attack** dice equal to your **Attack** value, while the defending plane rolls a number of **Defense** equal to their **Defense** value.

- Each value of 6-7 rolled on the **Attack** dice counts as 1 damage. An 8 rolled counts as a critical hit.

- Each value of 6-8 rolled on the **Defense** dice counts as a dodge and cancels out a hit. It takes 2 dodges to cancel out a critical hit.

- The defender loses **Health** equal to the hits that haven't been canceled out.

- A player can only attack if the enemy plane is in range. Range is determined with the knots on the

range string and measuring from the front arc of the attackers plane.

A new turn begins and the player who went second in the previous turn now goes first this turn.

Altitude: (optional rule)

- At the start of the game each player takes off with 0 altitude tokens.

- Once per turn when a player moves, they may spend 1 speed to Climb and add 1 altitude token.

- On a turn they haven't climbed, players may Dive by removing any number of altitude tokens to add that number to their speed for the turn.

Beware the enemy in the sun! When rolling dice for the attack step, if the attacker is at a higher altitude they roll an additional die.

Loop the Loop:

Any turn a player hasn't executed a climb or dive, they may spend 3 altitude tokens to play their ship 180° (facing backwards). The **Speed** cost of the maneuver is doubles (the straight becomes a 2 etc)

Alright Aeronauts, let's fly!
